

How to Hack Instagram Account Using InstaRipper Mobile App

Instagram is today's number one social network, with millions of active users daily from all over the world.

Many popular IG profiles, especially ones with hundreds of thousands and / or millions (& above) followers are on target by hackers.

These accounts have high value on a black market where many entrepreneurs and various internet marketers buy them to advertise their products or services.

In many cases it happens that a hacked Instagram account fails to be recovered back, because users are not aware that they keep access to their email address safe (E-mail they've used to sign up for their Instagram account). And without accessing into email inbox for a verification link sent by Instagram, it's impossible to retrieve a stolen account back. (In case user also didn't add a phone number as well, but this rarely happens).

So today **we are going to explain and teach you how to hack an Instagram account** which you have lost access to and recover it back even without having email login credentials.

There is an application not many people know about, which is developed specifically for the purpose of recovering lost IG accounts.

It's called **InstaRipper**, and since of its nature (hacking software) their developers are not allowed to advertise it anywhere because it can be used in illegal activities, which many people do, even though it's made to help users to retrieve back their lost or stolen accounts.

The image shows a screenshot of the InstaRipper website. At the top, there is a header with the InstaRipper logo and the text "Password recovery app". Below the header, there is a main content area with text describing the app's capabilities and a disclaimer. To the right, there is a "Works on:" section with icons for Windows, Mac, Android, and iOS, and a "DOWNLOAD" button. Below the main content area, there is a screenshot of the InstaRipper application interface, which includes a form for entering an Instagram username, a "Find Password" button, and a progress bar. At the bottom right, there is a "Testimonials" section with two user reviews.

InstaRipper is a must-have application for any Instagram user! Its powerful **password hacking** feature will allow anyone to recover their lost account in just few minutes. But keep in mind that we (authors of the app) will not be responsible for any illegal activity performed with this tool, such as breaking into other people's accounts without their knowing and permission.

If InstaRipper for some reason is not the right for you, learn [how to hack Instagram account](#) using the **other methods** such as keylogging or phishing.

Works on:

InstaRipper app will successfully work on Windows, Mac, Android (APK) and iOS devices.

* Jailbreak is **not** required for iPhone users.

To download, click the button below to go to the files page. The app is free.

Having this tool available for everyone to download is a double edged sword

InstaRipper is made for any modern operating system of nowadays, and full list include:

- Android (.apk) , iOS (iPhone / iPad) , Microsoft Windows and macOS
- Jailbreak for iOS devices is **not required**.

Users can **download InstaRipper app** on its official website:

➤ <https://www.instaripper.com/>

Using the program is very easy. It doesn't matter if you use it on desktop / laptop or a smartphone, since its interface looks very similar on every device.

All you have to do is to enter a username of Instagram account you decided to hack, choose optional features such as enabling proxy or cleaning user browser's cookies and cache memory.

And at the last step just press the button to begin its password search process.

Wait a minute or little more (depending on a profile password strength) and at the end the password will show up.

Your Instagram account will be recovered back, and you can start with logging into it.

And to prevent it getting hacked again, keep in mind to have a valid email address added into, and active phone number added in settings. So even though it gets hacked again, you can recover it with email or SMS message verification link anytime!

Good luck and thanks for reading. We hope this guide was helpful.

Sincerely Yours,
